

HW06 - AI Audit Report (Mandatory Appendix)

Student ID: 23127184 · Assignment: HW06 - API Testing · AI policy: Open

Declaration

I use AI tools for the following tasks.

(If any part of the work was done without AI, say so explicitly for that part rather than leaving it ambiguous.)

Tools declared

Tool	Model / version	Used for
Claude Code	Opus 5	Repository scaffolding, harness scripts, collection skeletons, source reading
		Test-case generation for API 1
		Test-case generation for API 2
		Test-case generation for API 3
		Test-case generation for API 4

Non-AI tools used: Postman, Newman + newman-reporter-htmlextra, Node.js, Python, Git, GitHub Actions.

Interaction log

Every interaction needs: tool name, date and time, the prompt verbatim, and the AI output. Keep them in order. Long outputs go in docs/ai-audit/transcripts/ with a link from the table row.

AI-001 | Scaffolding the HW06 workspace

- Tool: Claude Code (Opus 5)
- Date/time: 2026-08-23
- Prompt: "đọc yêu cầu hw06 và setup cho mình" (read the HW06 requirements

and set up the workspace), followed by the API selection FR-01, FR-06, FR-11, FR-13 and the decision to use Postman cloud features.

- Output: The HW06 directory tree, package.json + Newman toolchain, four

Postman collection skeletons with the X-Student-Id pre-request harness, Postman environments, data-driven CSV fixtures, the CI workflow and green-gate manifest, the phase/audit/critique/CI document skeletons, and a bug report seeded from a verified smoke run.

- My review: *(record what you checked and what you changed)*

AI-002 |

- Tool:
- Date/time:
- Prompt:
- Output:
- My review:

Review discipline applied

For each batch of AI output, record which of these was done:

- ☐ Read every generated test case against `refs/spec/api_specification.md`
- ☐ Checked expected results against the requirement document, not against

the SUT's observed behaviour

- ☐ Executed the cases rather than trusting the AI's predicted results
- ☐ Corrected or discarded the cases that did not survive review
- ☐ Recorded the corrections in the phase-2 audit documents

Bloom-AI level evidence

Level	Where it is evidenced
G9.2 Apply	Driving the AI step by step through partitions, state transitions, security and schema — <code>docs/phases/*/01-generate.md</code>
G9.3 Analyse	VALID / INVALID / INCOMPLETE audit with reasoning — <code>docs/phases/*/02-audit.md</code>
G9.4 Collaborate	Extension cases and the diagnosis of why the AI missed them — <code>docs/phases/*/03-extend.md</code>
G9.5 Create	The AI-driven test generator design — <code>docs/design/GENERATOR_DESIGN.md</code> and <code>.claude/skills/</code>
